WAVEFORM ACOUSTIC TILES [JOINT DESIGN PROCESS]

CEILING TILES FOR A MUSEUM ATRIUM IN CONNECTICUT WITH SAIL MOTIFS.

KEYSTONE JOINT SIMILAR TO MITER WITH SPLINE

Joint X is a co-planar joint that meets two converging arc ribs together.

Joint Y is not co-planar and joins an arc rib with the flat and longer rib that makes up the longer side of the triangulated panel.

The most stressful part of fabricating these panels is the glue-up process where clamps are enacting large amounts of pressure on the curve of the ribs which are used as the scaffolding for the surfaces to retain their respective concave and convex forms.

MORE WIDTH AND BRACES WERE ADDED TO JOINT X TO DECREASE HIGH STRESS POINTS

Here I got to play with the material tolerance and the kerf of the lasercutter. The joints have a precision fit so our surface fits better on the ribs.

Joint Y here is adjusted to leverage more of the longer rib's stiffness to prevent fracture at the high stress point right at the corner.

The adjustment to Joint Y also allows the ribs to be used for both concave and convex configurations.

BRACES WERE ADDED TO Y JOINT AND HIGH STRESS POINTS ARE CURVED TO OFFSET SHEAR AND TORSIONAL FORCES

The purpose of the miter joint with a spline was to create a seamless keystone joint. However, I took this a step further and added braces allowing us to skip the glue-up process for the scaffolding. With both of these keystone joints, there is no glue necessary at all because they are snug-fit and have been precisely adapted to the material thickness.

This allows the scaffold ribs to flex a little on impact since there is no brittle glue holding the ribs stiffly in place.

Lastly, curves were added to reinforce the breaking points while remaining minimal and out of the way of the extending surface.

WAVEFORM ACOUSTIC TILES [1/4" MOCKUP OF RIB AND SURFACE]

1/16" chipboard surface with ribs made of the same material + super-glue adhesive

1/32" acrylic surface with 1/4" acrylic ribs + super-glue adhesive

1/32" polystyrene sheet and sides with 1/4" acrylic rib skeleton + 2354 ABS Polystyrene Weld-on

Panel Assembly

WALNUT MOCKUP [SECTIONAL VOLUMETRIC MODEL]

PILOT MODEL FABRICATED TO TEST FEASIBILITY OF SCALE, METHOD, AND ABSTRACTION FOR A LARGER PRODUCTION MODEL.
