

#1 CAMERA ERGONOMICS

Inspired by my camera, the RICOH GR3, I started with the initial hand grip and rectangular camera body form and added a rotating lens mechanism. All pieces were taken from within the Vespa 125 set.

#1.5 DEADPOOL TURBO GT3

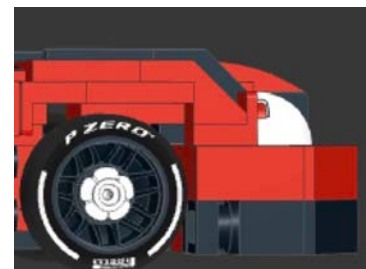

Intrigued by Porsche design language since I first saw them in Pixar's Cars (2006), I wanted to manifest some of the curves the 911 line uses in its front and side profiles while staying true to a track car's proportions. The red color and forward aero curves are a homage to Lightning McQueen's rounded fenders and chassis.

#1.75 MOUSE ERGONOMICS

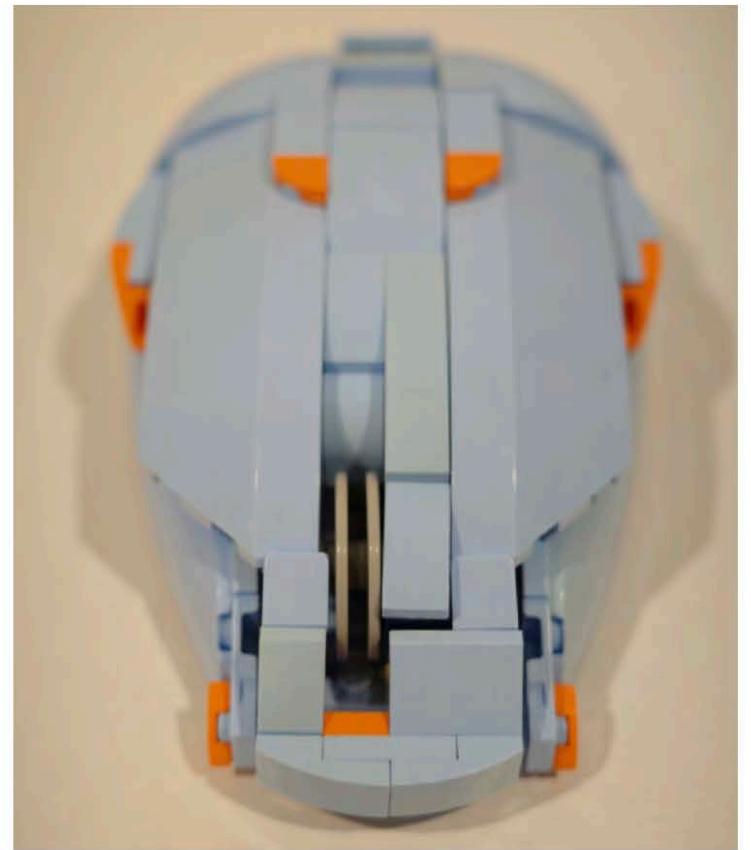

RESTING POSITION

HANDGRIP + BUTTONS

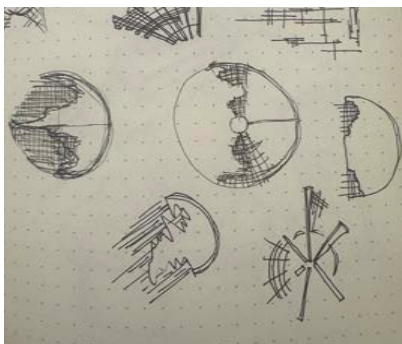

I designed this model as a hybrid between a bigger gaming mouse and the simplistic ergonomic Logitech designs. Made completely with Vespa 125 (10298) parts. This piece emphasizes a full-scale and proportions of the consumer technology packed into an ergonomic mouse today while emphasizing curvature to fit better in the hand. The orange accents on the buttons help emphasize their functionality.

#2 THESIS: PLANETARY EXTINCTION MODEL IN-PROCESS

Architecture thesis model that imagines the Earth mined until there is no natural material left. It appears to have been processed and rebuilt with man-made materials.

#3 STREET PHOTOGRAPHY PORTFOLIO

shot on Apple iPhone 12 Pro and RICOH GR3X HDF.

STEP ONE:

FIND VERTICAL LINE IN SCENE TO ALIGN WITH THE FRAME OF LENS.

STEP TWO:

FOCAL POINT/EYE NEEDS TO BE IN OR HEADING TOWARDS THE TOP HALF OF THE FRAME.

My photos are always unedited and come straight off the roll.
